MacICT presents

GAME DEVELOPMENT with UNITY 3D

Unity 3D Boot Camps - Suitable for students in Stages 5 and 6

Ever wanted to learn how to use a professional game engine?

Unity (unity3d.com) is a powerful, easy-to-learn game engine that is very flexible and well supported. *Unity* supports almost every platform and has a huge number of games made with it. *Unity* has a free version with loads of functionality allowing anyone to use it. Learning *Unity* is a great first step into learning how to use big game engines.

INTRODUCTORY BOOT CAMP

MacICT is now offering student Boot Camps (excursions) in the use of the *Unity* software. The course uses some pre-made assets so that we can quickly cover the basics and move on to the core of how to use *Unity*. In addition, once you have completed the course you will have online access to many parts of the content used during the workshop for you to continue learning.

In this hands-on workshop, students will:

- become familiar with the editor
- create game objects
- build levels
- tweak an object's behaviour
- be introduced to scripting in *Unity* with C#.

We would expect the students to have some prior programming experience (any language).

Course Developer & Workshop Trainer

Peter Reeves

Peter Reeves has been teaching games design at Macquarie University for two years using *Unity*. He has a Bachelor in Information Technology and is currently doing a Masters of Research. He participated in the Global Game Jam 2014 where his team received an award for Technical Excellence. He has a great passion for computer graphics, games and programming.

HOW TO BOOK

Contact the Centre to arrange a date:

macictsupport@det.nsw.edu.au
(02) 9850 4310
